

# GE IT Graduate Careers

## Program Overview

UK-2014/15

## Internships

We offer a 12 month industrial placement (GE ITLP Interns), in which students gain valuable experience within one of GE's major business units:

- Aviation
- Capital
- Corporate
- Energy Management
- Healthcare
- Oil & Gas

Our range of roles is vast - The program gives interns the opportunity to work on projects in system management, application development, business process re-engineering, infrastructure, security/controllership and customer support. Coupled with the diversity of the markets we operate in, our internship creates an environment in which interns can develop their talent, whilst building a solid platform to kick start their career.

Interns have responsibility and deliver on inspiring projects, enjoy exposure to key IT and business leaders, and receive support and mentorship from current full-time IT Leadership Programme members, alumni's, and industry experts.

One of the biggest benefits of being an intern at GE is the fact that it is a proven pipeline for ITLP.

This year we recruited 100% of our ITLPs from our internship pipeline, a figure that we're not only very proud of, but hope to continue in the future.

## Graduates (ITLP)

The IT Leadership Program (ITLP) offers a 2 year experience, spanning 4 rotational assignments, to those with a passion for technology. ITLPs are given the opportunity to grow their leadership skills, business acumen and technology aptitude, while building a career with unlimited potential.

As a pipeline for future leaders of GE's world-class global IT organisation, the IT Leadership Programme has partnered with Indiana University to deliver continued education in technology, project management, and leadership; Members of the IT Leadership Programme are enrolled as Indiana University graduate students, and complete a 15-credit IT Leadership Certificate over the two years. This includes in-person classes inside and outside of the U.S., and 9 credits of IT electives.

If you are looking to make a measurable impact on the way GE does business, gain exposure to senior level IT and business leaders, and expand your global network by working and training with colleagues from around the world - your wait is over.
