PATHFINDER

C# DEVELOPERS NEEDED

DEVELOPER VACANCIES & PLACEMENTS

We are urgently seeking a number of developers and testers to work on an exciting start-up venture based in North Wales.

There is an immediate requirement as the project is already underway, but we are also looking to create up to six full-time permanent positions over the next 12-18 months. This number may even increase, depending on the commercial success of the project.

SALARY

£16-20,000 depending on experience and capabilities.

THE POSITIONS

The positions could be filled in any of the following ways, depending on a candidate's circumstances, and applications are welcomed from all:

Short-term
Candidates looking for a short-term position over the summer months

Placement
Candidates looking for a year's Industrial Placement as part of their degree

Permanent
Candidates seeking a permanent position having finished their degree

In all cases, immediate starts are available.

LOCATION

The business is currently located in Llandudno but will be relocating later this year to new premises due to expansion. Due to the location of existing staff the new premises will be within travelling distance of Llandudno.

Successful candidates from outside the area will be offered assistance in finding appropriate accommodation.

THE WORK

The project will involve working with the current developers to build and test new features for the first release of our system using Visual Studio 2013, Team Foundation Server and Web Essentials. You will be developing in C# using Linq, Entity Framework 6, MVC 5 with Razor and SAAS.

As well as getting to work with the latest technologies from Microsoft and AWS and hone your existing skills, you will be part of a highly experienced professional team offering the opportunity to learn more than just new programming skills.

THE CANDIDATES

We are looking for candidates experienced with C#, Linq, MVC and Razor as a minimum who have examples of previous work either completed commercially or as personal projects using these technologies. Candidates should be enthusiastic and be excited about learning new skills, innovating and creating a new product.

Experience with SAAS, Websockets, Bootstrap, Selenium IDE and Unit Testing would be advantageous. Experience in Wordpress and/or other Open Source applications may also be of use.

Applications should include a detailed CV and should be sent to :
