Love Python?

Tiger Computing, the UK's leading Linux support provider since 2002, is offering an Industrial Year placement.

What you'll be doing

Improving some of our scripts, writing others from scratch, writing code to have one application update another, maybe rewriting one (or more) of our existing internal applications in Django.

The basis for most of the work will be Python, but there could be some bash scripting as well. Note: there's unlikely to be any Java, C or C++.

What you'll get

The opportunity to work with some of the best Linux people around, and to write code that will be used by an Open Source business every day. Real coffee. Oh, and we'll pay you £18K.

What you need

Some experience of Python, and a willingness to learn more. Grey matter. Sense of humour. Passion.

How to apply

Send a CV and a covering letter explaining why you would relish the opportunity to work at Tiger Computing for a year to kae@tiger-computing.co.uk by 30 April 2016.

About You:

- You love the idea of **being paid to write code**.
- You're **smart**, clear thinking, proactive.
- You **Get Stuff Done**.
- You're able to speak and write articulately. We're not looking for the next Dickens, but you do need **good communications skills**.

About Us:

- We provide Linux Support and Consultancy services to businesses throughout the UK.
- We make sure that their Linux servers work well, reliably, securely and consistently.
- We're based in the (beautiful) Forest of Dean

The small print

This is a one year contract. Dates are flexible, but likely starting date is in June or July. You will need your own transport: our office is not reachable by public transport. More info: www.tiger-computing.co.uk.
