

Codel Software Ltd

Job Description – May 2017

Industrial Placement Software Developer

A leading Software Development company based in Bridgend that specialises in web, cloud and mobile software applications has a vacancy for an Industrial Placement Software Developer.

The position is available to any student that would like the experience of working with a leading commercial software development company based in South Wales. The position is available for work between June 2017 and August 2018.

The main duties include but are not limited to:

- Software development
- Presenting ideas for system improvements
- Working closely with analysts, designers and staff
- Producing detailed specifications
- Testing the software in controlled, real situations before going live
- Preparation of training material for users
- Maintaining systems once they are live

Our clients include SMEs, blue chip national and multi-national organisations. The chosen candidate should have a strong technical background and basic knowledge of Microsoft .Net, VB.Net, SQL, C#, HTML, XML, Java and JavaScript. The successful candidate will be expected to work on external client projects as well as the continuous development of the company's innovative Cloud HR Software-as-a-Service applications.

The candidate is expected to be self-motivated, be able to fit seamlessly into and maintain the high standards of the existing team and demonstrate maturity and integrity. In return the company offers a rewarding working environment, continuous training and a salary based on performance and skills attainment.

Interested applicants should send their CV preferably by email for the attention of: -

Adrian Lewis, Commercial Director (adrian.lewis@codelsoftware.com)
