IT Job Description

Job Title: Student Systems Developer Department: IT

Salary: £16k per annum **Duration:** 1 year (exact term by

agreement)

Reports To: Technical Systems Support & Development Manager

Location: Newtown Wales

Opportunity:

- To work as part of an 11-strong development team supporting a broad range of systems and applications used throughout the business across customer ordering, retail and logistics business areas.
- To work with Oracle SOA suite and Business Process Orchestration Language (BPEL) to develop and maintain backend systems and integrations.
- To work with Oracle Application Development Framework (ADF) and Webcenter Portal to develop and maintain user interfaces and front-end applications, predominantly centred around the in-house Synergy CRM system.
- A number of agile collaboration technologies are currently being rolled-out with the team from the Atlassian suite including JIRA, Bitbucket, Hipchat, Confluence and Bamboo. The successful candidate will have the opportunity to gain experience with these.

Main Purpose:

- To develop and configure software, databases and applications that service business processes and that complement and extend the functionality delivered by existing packages and solutions.
- To support existing software and databases by carrying out modifications to improve functionality or to fix faults.

Scope of Job – main duties and responsibilities:

- To write and support software in a variety of languages and development environments.
- To work closely with analysts and other technical specialists within the Company to ensure that the developed solutions meet the needs of the business.
- To work closely with third party technical experts, consultants and developers in the support of software, systems and packages.
- To develop reports and queries.
- To produce necessary documentation i.e. specifications, test scripts, training guides etc.

Date: 13th January 2017
