

Junior developer

SeeLocal is a tech start-up company in our third year looking for a junior developer to aid in the continuous integration and development of a self-service web platform.

We are looking for a developer that has an all-round knowledge of programming and tech so understands the principles of OOP, basics of web development, Persistent Data (SQL, NoSQL, MongoDB etc), Agile Methodologies and a quick read.

You'll be in contact with the lead developer on the project as well as communicating with designers, management staff and web-platform administrators (Account managers) so will need to have excellent communication skills and a friendly approachable nature.

Required skills:

- Object Oriented Programming skills (Java / C# Preferred)
- Basic understanding of HTML, CSS, JavaScript etc
- Persistent Data (SQL / NoSQL i.e MongoDB or ElasticSearch)
- Knowledge of source control (Git, BitBucket, SVN etc)

Preferred skills:

- Knowledge of modern IDEs such as VisualStudio, Eclipse etc
- Knowledge of AGILE Methodologies
- Ability to work in a team but also autonomously when needed
- Test Driven Development
- Experience with UX / UI Development and Design

You'll need to be a quick read and learn proprietary packages but will have guidance from the senior developer where needed.

The role will eventually become a DevOps / Full-stack development role with the integration of Continuous Integration (CI) tools and source control.
